BUNGLIOPMENTAL STAGE: AT E-11, EXPRESSION WAS RESTRICTED TO THE DEVELOPMENTAL STAGE: AT E-11, EXPRESSION WAS RESTRICTED TO THE OLFACTORY PIT THE BASAL AND ROSTRAL SURFACE OF THE TELENCEPHALIC VESICLE, THE EYE ANLAGE, THE EPITHELIUM OF RATHKE'S POUCH, AND SOMITES. AT LATER DEVELOPMENTAL STAGES, IT WAS WIDELY DISTRIBUTED IN NEURONAL AS WELL AS IN MESENCHYMAL AND EPITHELIAL STRUCTURES OUTSIDE THE NERVOUS SYSTEM. AFTER BIRTH, MESSNCHYMAL LEVELS DECREASED RAPIDLY AND EXPRESSION BECAME RESTRICTED TO SPECIFIC SETS OF NEURONS IN THE CAN. IN THE MATURE CNS, IT IS DETECTABLE IN MITRAL CELLS, NEURONS OF THE ACCESSORY BULB AND CEREBRAL CORTEX, CEREBELLAR PORKINJE CELLS, AS WELL AS A SUBSET OF CRANIAL AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ENGAGE IN THE FORMATION OF

YMK1 protein - yeast (Saccharomyces cerevisiae)
N;Alternate names: protein N2359; protein YNLO74c
C;Species: Saccharomyces cerevisiae
C;Date: 08-Jul-1995 #sequence_revision 01-Sep-1995
C;Accession: S53906; S27290; S63006; S63935

C; Genetics:
A; Gene: HSF1
A; Map position: 4COP9-4G3845

A; Introns: 111/3
C; Function: cTFC>
A; Description: transcription factor that binds to heat shock promoter elements
C; Superfamily: tomato heat shock; leucine zipper; nucleus; stress-induced protei
F; 53-148/Domain: HSF DNA-binding domain homology <HSF>
F; 181-202/Region: leucine zipper

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                B B

CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-,
alpha-(2->8)-glycosidic linkages of terminal sial
oligosaccharides, glycoproteins, glycolipids, col
synthetic substrates.
SUBCELLULAR LOCATION: Membrane-associated (By sin
TISSUE SPECIFICITY: Expressed in brain.
SIMILARITY: BELONGS TO FAMILY 33 OF GLYCOSYL HYDE
SIMILARITY: CONTAINS 3 BNR REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  FUNCTION: Plays a role in modu

CATALYTIC ACTIVITY: Acyl-CoA + 1-acyl-sn-glycerol 3-phosphat CoA + 1, 2-diacyl-sn-glycerol 3-phosphate.

PATHWAY: SECOND STEP IN DE NOVO PHOSPHOLIPID BIOSYNTHESIS.

SUBJECTLULIAR LOCATION: Inner membrane-associated (Potential).

SIMILARITY: BELONGS TO THE 1-ACYL-SN-GLYCEROL-3-PHOSPHATE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  σ
                                                                                                                                                                                                                                                                                                                                           synthetic substrates.
SUBCELLULAR LOCATION: Membrane-associated.
TISSUE SPECIFICITY: Highly expressed in skeletal muscle, adrenal gland and thymus, followed by pancreas, liver, h thymus. Weakly expressed in kidney, placenta, brain and MISCELLANEOUS: Optimum pH is 3.8.
SIMILARITY: BELONGS TO FAMILY 33 OF GLYCOSYL HYDROLASES.
SIMILARITY: CONTAINS 3 BNR REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        glycoconjugates.

CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)
alpha-(2->8)-glycosidic linkages of terminal stalic residues
oligosaccharides, glycoproteins, glycolipids, colominic acid
